PART ONE

Background

Project Background

UCB CS61B

This project is a project of the course CS61B in UCB.

DBMS

Implement a miniature relational database management system.

Java

This project is done by Java.

Commands

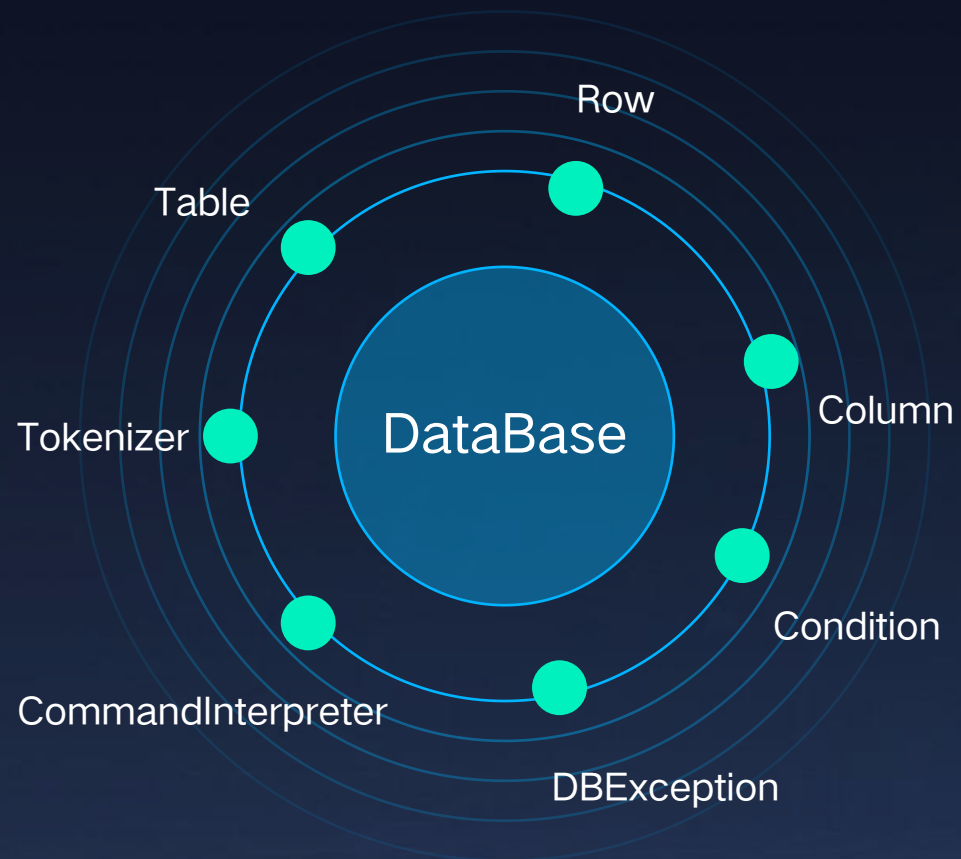

This DBMS support several basic mysql commands.

PART TWO

The background is a dark blue field filled with numerous small white dots, some of which are larger and colored in shades of teal, orange, and blue. A prominent teal wavy line curves across the right side of the image. A horizontal teal bar is positioned in the middle-left area, containing the word 'Design' in white. The text 'PART TWO' is located in the upper left corner in a stylized, italicized teal font.

Design

Project Design

Data(.db file)

Basic Function

Enhanced Function

■ DataBase Module

Function

- To store several Tables;
- DB is a collection of Tables, indexed by name.

Method

- `get()/ put()` table from/into DB.

Table Module

Table

Function: A table in a DB

Method

Basic

readTable(): Read the contents of the file NAME.db, and return as a Table

writeTable(): Write the contents of TABLE into the file NAME.db

findColumn

add(): add row to a table

print()

selectcolumn()

one column

several columns

Select(): return table

Extend

Sort(): order the sequence of rows in a table

One column

Several columns

■ Row&Column Module

• Row

- Function: describes a single row of a table
- Method: equals()

• Column

- Function: efficient index of a row list
- Method: column(): Selects column according to the name from a row of one of the given TABLES

■ CommandInterpreter Module

■ Condition & Tokenizer & DBException Module

• Condition

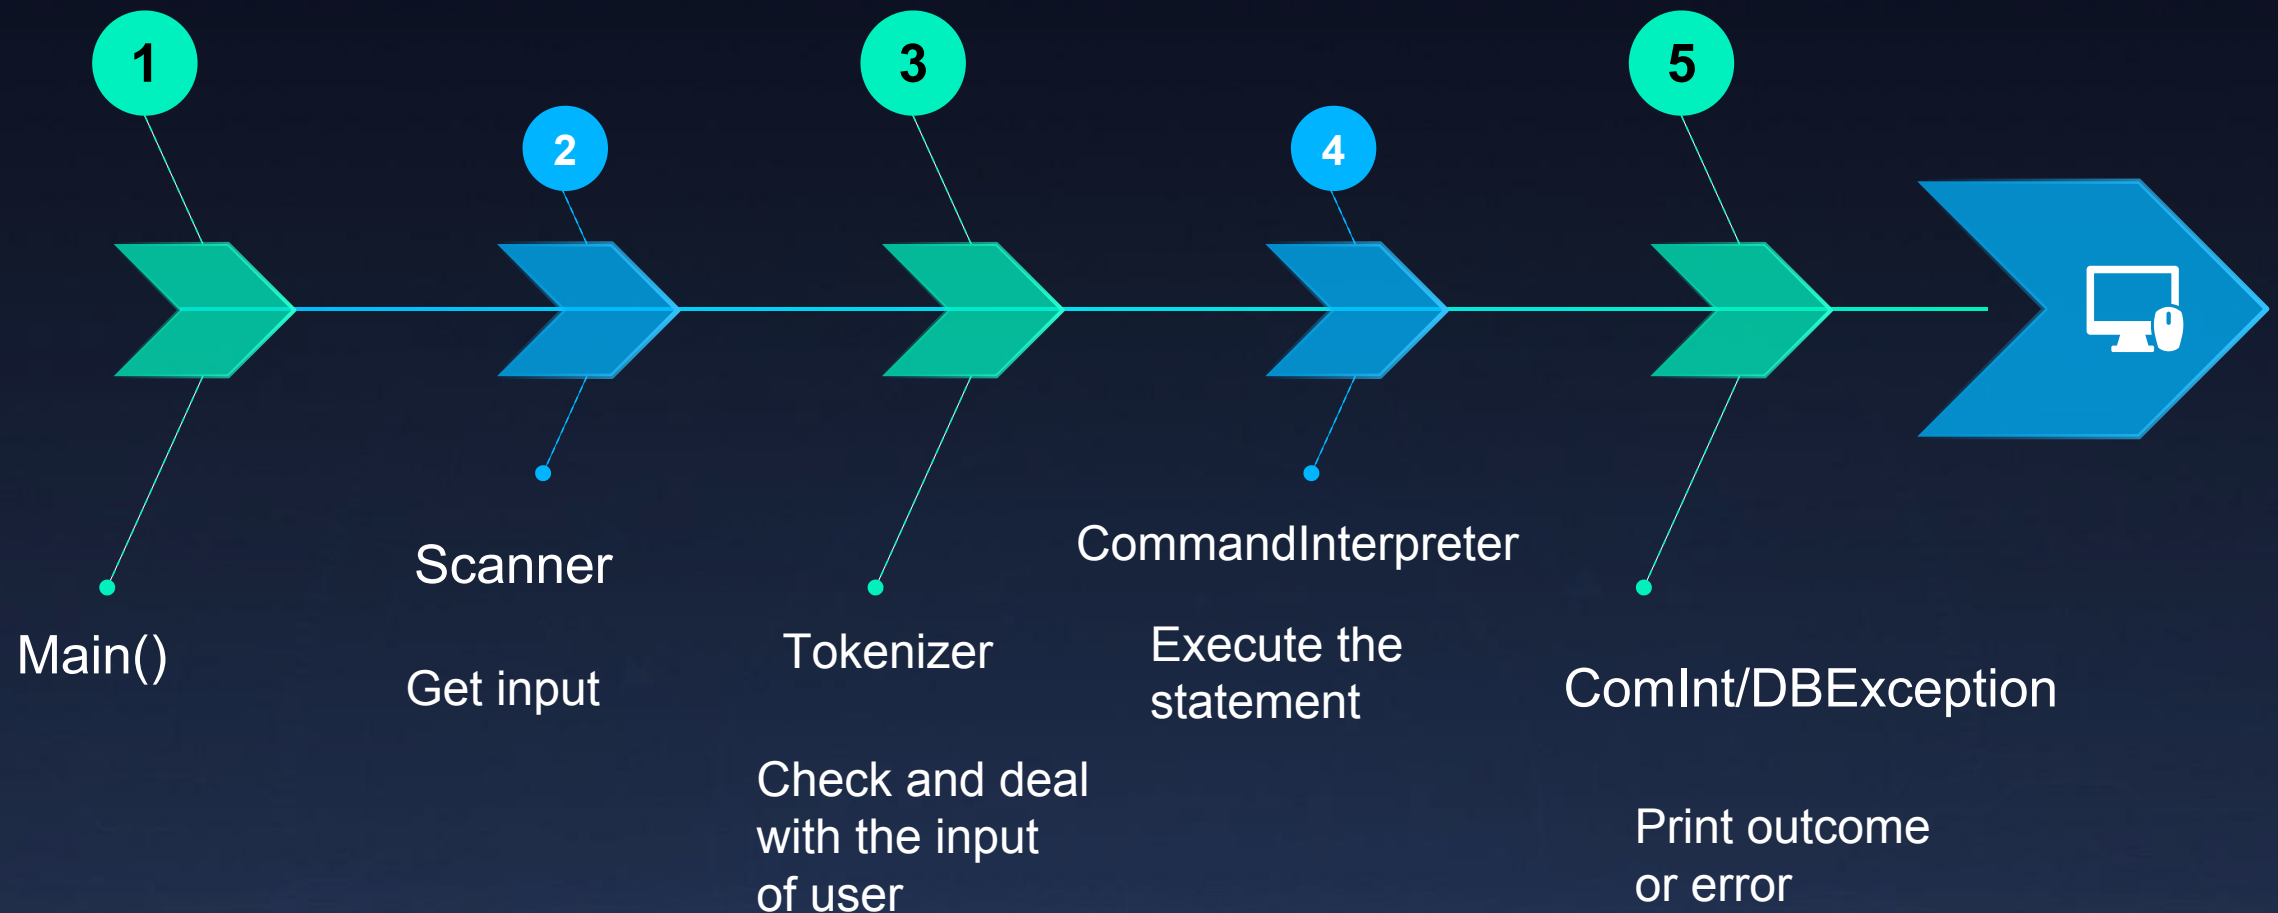

- Function: Check whether rows are satisfied all condition
- Method: test()

• Tokenizer

- Function: read command from a given Scanner

• DBException

Program Running Steps

PART THREE

Basic Test

■ UCB Basic Tests

Load table
from .db

Omit
comments in
expressions

Basic select
from where

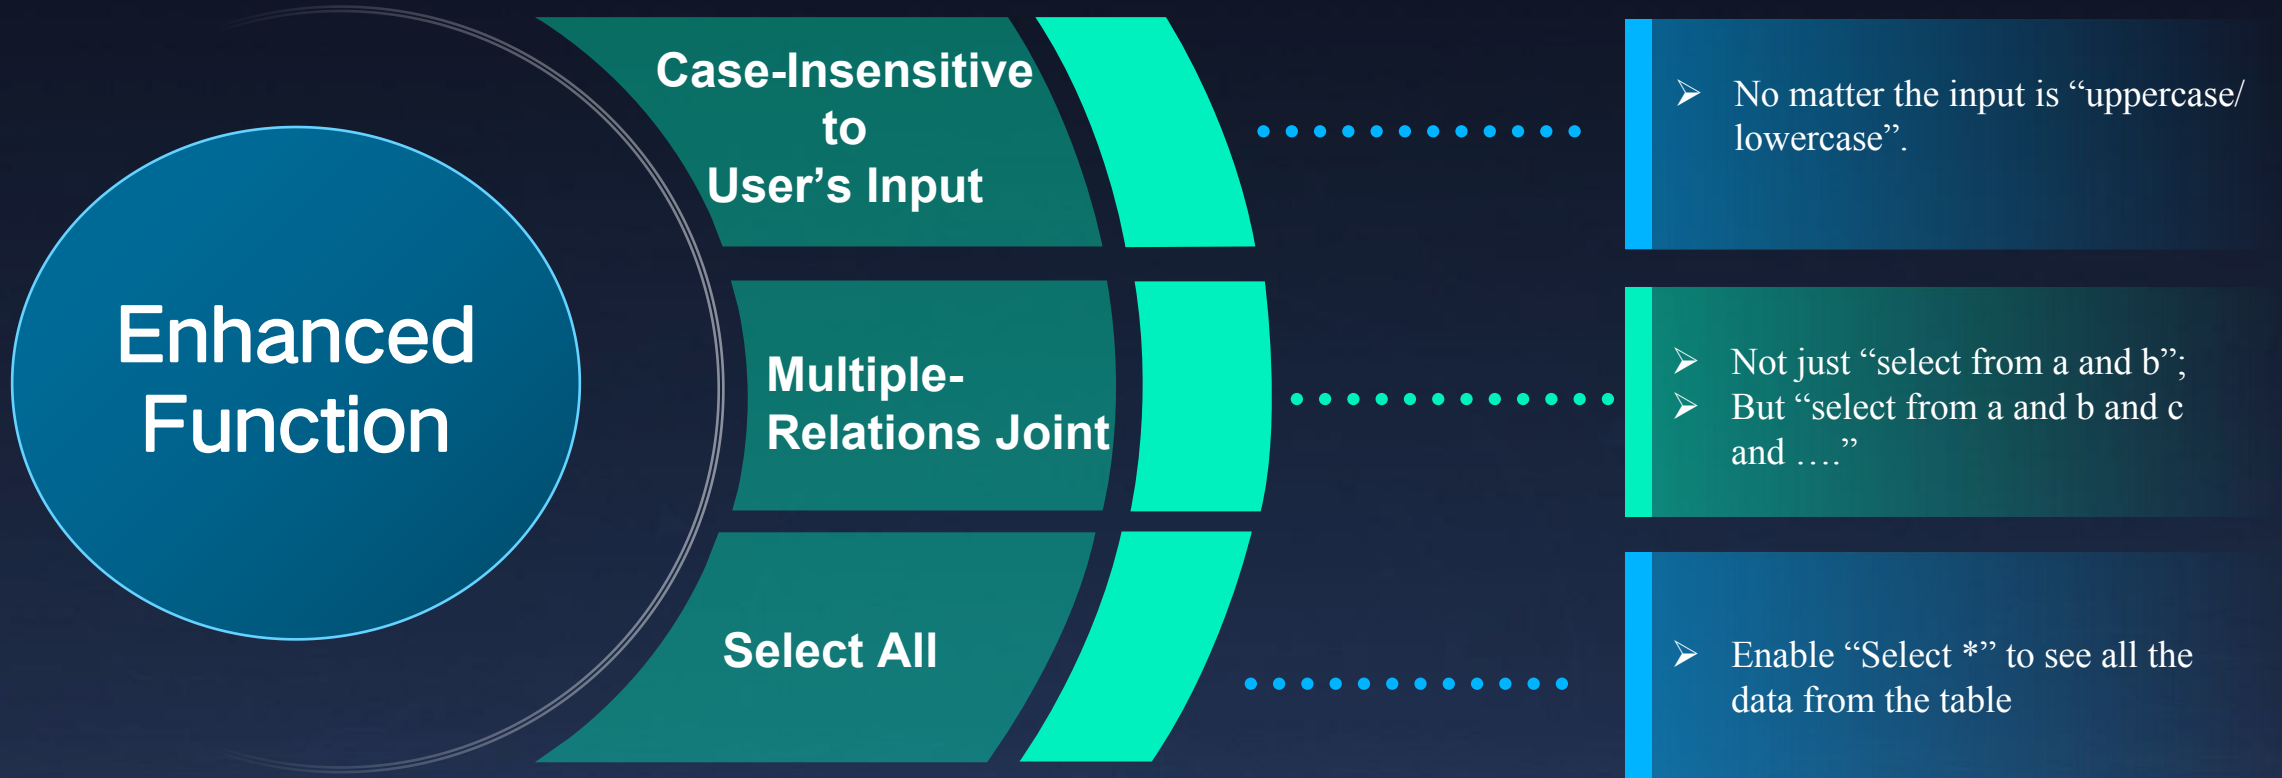

Join two
tables

Create table
from select
clause

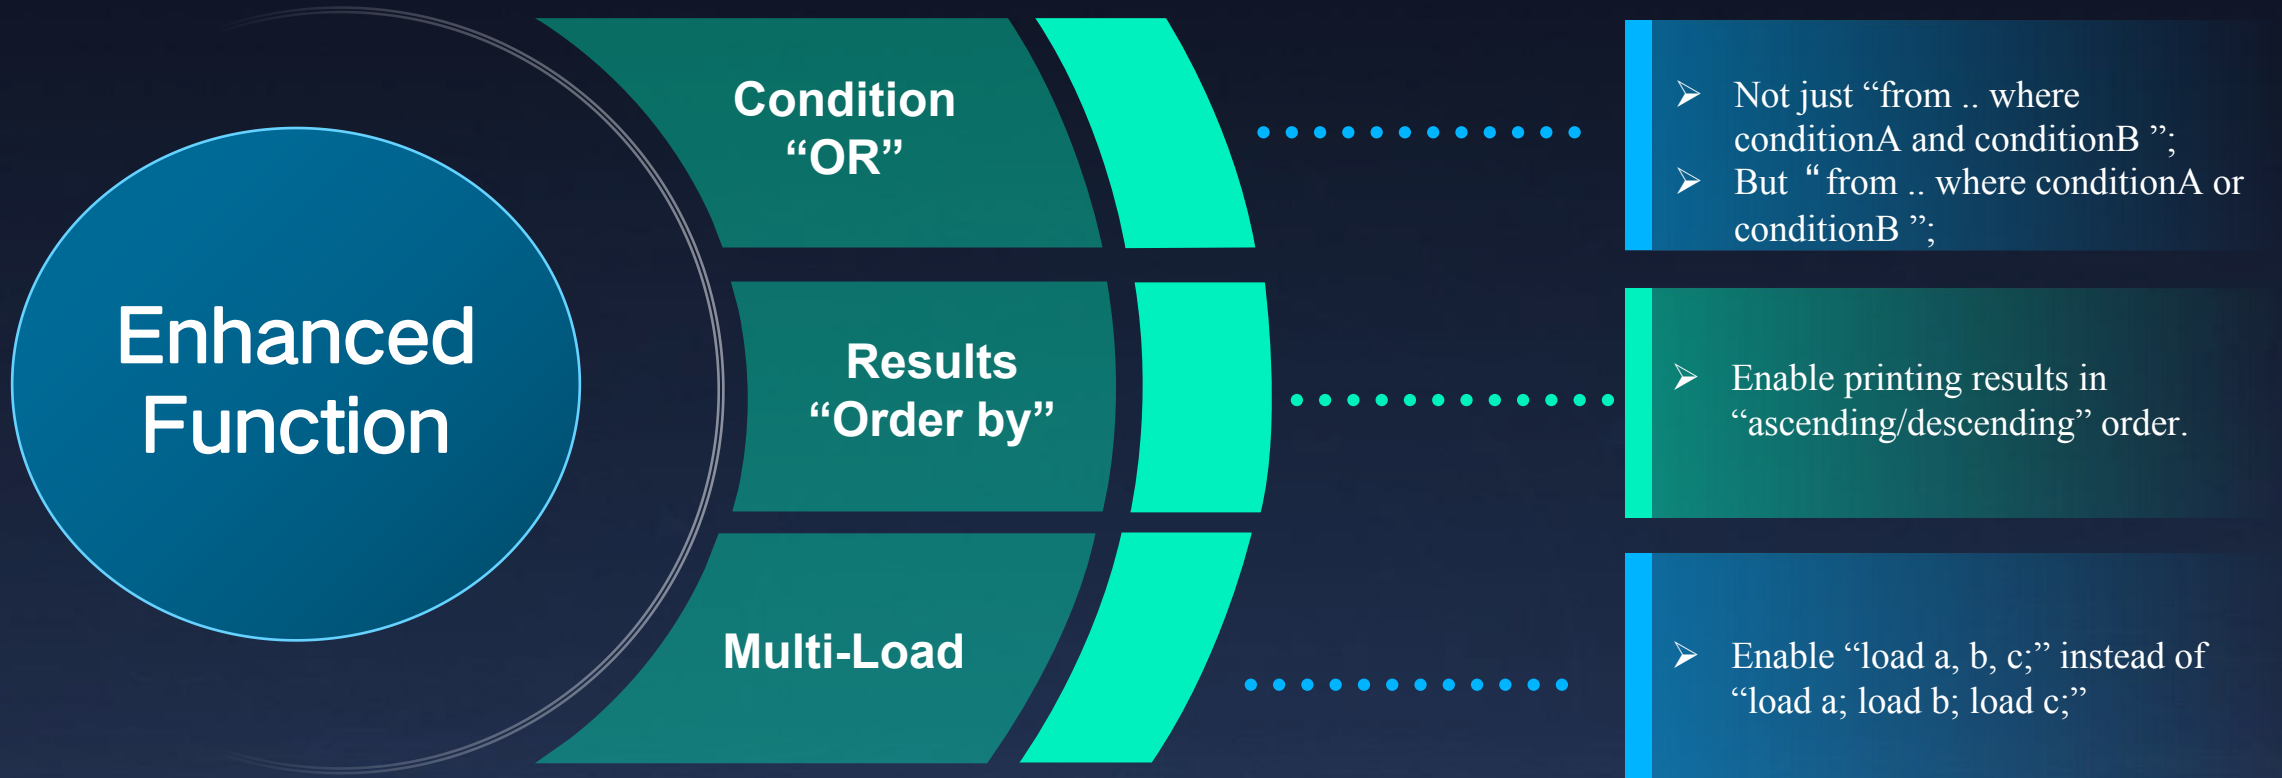

PART FOUR
